

CSUM INTERNATIONAL EXPERIENCE ROATAN, HONDURAS 2023

OCEANOGRAPHY IN THE CARIBBEAN

Good evening to my readers, I am one of the MPM, Oceanography majors attending International Experience in Roatan, Honduras.

Here, we have over 20 dives scheduled, and today was the beginning of our 19-day trip here at Anthony's Key Resort (AKR). We began with an introductory lecture about the corals we would see here in the Meso-American reefs and the AKR's backyard. The fringing reefs that we can see with our eyes on the surface are not the same until we look with our eyes and go underwater. Feel what the fish feel and see what the fish see.

The world is 70% ocean. Within that 70% ocean, reefs only make up a whopping 0.2% of the area.

Everyone that wants to explore space, or understand the unknown that is above us. They want to learn more about where the world is, and how planet Earth fits in outer space.

How does a good marine biologist work?

"With a fish-in-sea"
